

Builder< Gapp >

```
classDiagram
    class Builder {
        <Gapp>
    }
    class GappBuilder {
        +WithAppSetting()
        +WithScene()
        +GetInstance()
    }
    GappBuilder --|> Builder
```

The diagram illustrates a class hierarchy. At the top is the 'Builder< Gapp >' class, represented by a white box with a gray border and two empty internal compartments. Below it is the 'GappBuilder' class, represented by a gray box with three compartments. The top compartment of 'GappBuilder' contains the class name. The bottom compartment contains three methods, each preceded by a plus sign: '+ WithAppSetting()', '+ WithScene()', and '+ GetInstance()'. A blue arrow with an open triangular head points from the top of the 'GappBuilder' box to the bottom of the 'Builder< Gapp >' box, indicating inheritance.

GappBuilder

+ WithAppSetting()  
+ WithScene()  
+ GetInstance()
